ENGINES

- Unity
- Unreal Engine

LANGUAGES

- C#
- C++
- Blueprint visual scripting

CORE SKILLS

- Gameplay programming
- Systems design
- Procedural generation
- Enemy & navigational AI
- Shader programming
- Physics-based mechanics
- Level design

TOOLS & PRACTICE

- Git Flow branching
- GitHub Desktop & Git CLI
- Repository structure
- Asset file management
- Technical documentation
- User testing & telemetry
- Team leadership
- Studio production

EDUCATION

BSc (Hons) Games Design and Development (Programming)
University of Greenwich · 2:1 · 2026

BTEC Extended Diploma in Games Design
North Kent College · D*/D*/D

BTEC Creative Media
Longfield Academy · Distinction · 2021

INTERESTS

- PC building and hardware
- Elden Ring
- Inscryption
- Dave the Diver
- Chelsea FC

Joshua Gorton

GAME DESIGNER / PROGRAMMER

PROFILE

Gameplay programmer and University of Greenwich graduate specialising in Unity, Unreal Engine and C# scripting. Lead Programmer on Whoever Left the Light On, a surreal POV puzzle game shipped to Steam, leading four programmers inside a twelve-person studio. I enjoy the whole development process, from physical prototyping through to telemetry analysis and build optimisation, and I love solving problems that give players a better experience.

SELECTED PROJECTS

Whoever Left the Light On

2026

Lead Programmer · Micro Studio · Released on Steam

- Led a team of 4 programmers within a 12-person studio, shipping the game to Steam.
- Designed core game systems, authored technical documentation, and managed team organisation across the full production cycle.
- Owned the team's Git practice: Git Flow branching, repository structure and file-naming conventions across 4 programmers.

Dissertation – Procedural Generation Research

2026

Solo research project · University of Greenwich

- 'Can Generated Points of Interest Intuitively Communicate Resource Affordances to Players?'
- Built a Unity survival game where players sail between procedurally generated islands, testing whether an island's appearance could signal its resource without explicit markers.
- Designed and ran a 32-participant study against a colour-coded control group, then analysed the results.

Guns On Ice

2025

Unity · Solo project · itch.io – Built recoil-based physics and sliding movement mechanics, fleshed out into a full arcade game.

Day in the Life of a Carrot Farmer

2024

Unity · Team of three · itch.io – First joint university project: built the player movement and camera, the interaction system, and the power-up system.

CapSize

Game Jam

Board game · Team of four – Systems design and physical hex-tile prototyping, shaping the wager/risk mechanics around chance-based dice rolls and event cards.

The Castle 2D

College

Unity · Solo project · First finished game – Branching corridors, sword combat, hidden power-ups and boss encounters, told through environmental storytelling with no dialogue.

TECHNICAL DEMOS

Black Hole Shader (Unreal Engine) – Real-time gravitational lensing and light distortion, built with Blueprint scripting and mathematics.

Hole in the Wall (Unity) – A flocking-AI simulation where 2D boid agents steer themselves into position to pass through an aperture in an advancing wall.

OTHER EXPERIENCE

Sous Chef

Five years

- Led and worked within a fast-paced professional kitchen.
- Developed team leadership, composure under pressure, and coordinating people to tight deadlines – all of which carry directly into studio production.
